

Aluminium foil Fiberglass Sleeve

-----Velcro type

1. Product Introduction

Aluminium foil Fiberglass Sleeve is constructed by slited aluminum foil glass fiber blanket, and then stitching the edges with velcro hook and loop closure. Excellent radiant heat reflection provides good protections to the hoses, cables, wires and such kind of pipelines, which are working under high heat conditions; Low heat conductivity to keep the underlying pipelines cool. It is widely used as an excellent automotive under-the-hood protection.

The velcro closure is designed for easily installation and disassembly without disconnect the device or circuit.

2. Product Characters

Inner diameter: 15mm-300mm

Length range: 1m - 30m

Thickness: 2mm

Working temperature: -40° to 200°C

High Temperature Protection-95% heat reflective

ONE STOP SOLUTIONS FOR HIGH TEMPERATURE SYSTEM
